

This is Harold. He often runs
several errands at once.

Hungry-Mart

After buying groceries, Harold likes to visit his grandkids to give them the candy he buys at the store.

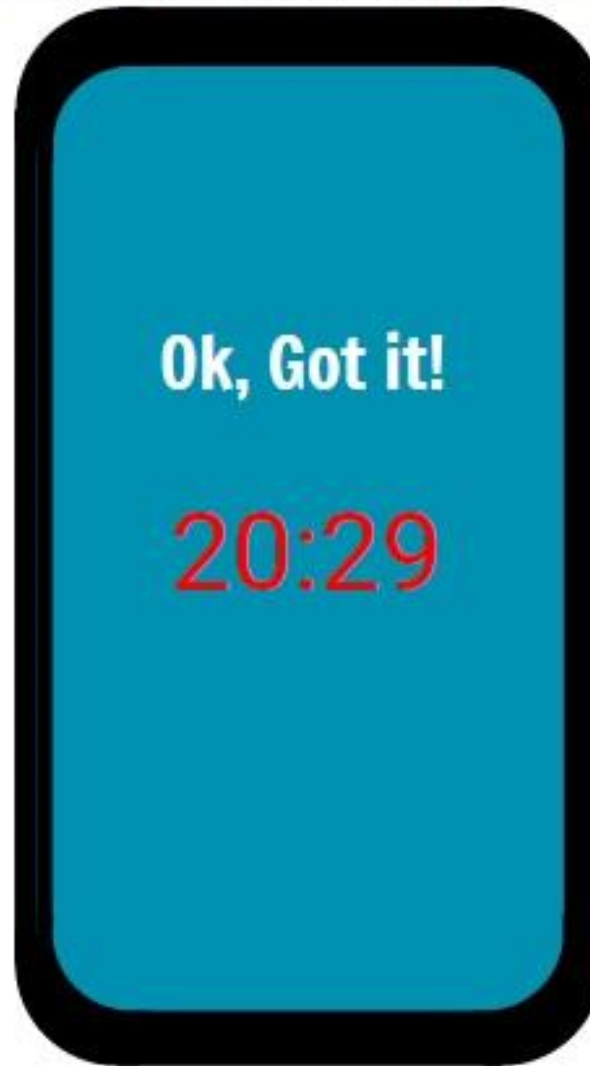

Harold loves seeing his grandkids, and usually gets sidetracked talking with them, which can put his groceries in danger of spoiling

That's why Harold uses the Temperature Monitor App, and tells it he has groceries in the car.

The app knows how much time to wait until reminding Harold he needs to get home thanks to his item selection, with a helpful countdown.

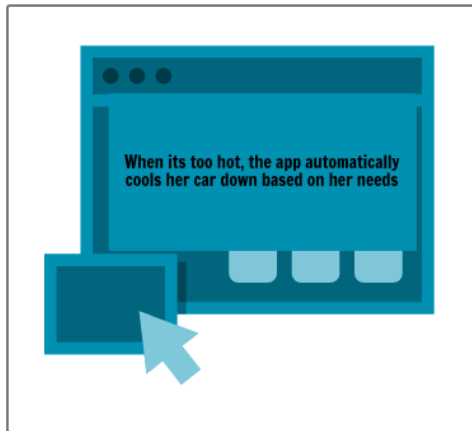

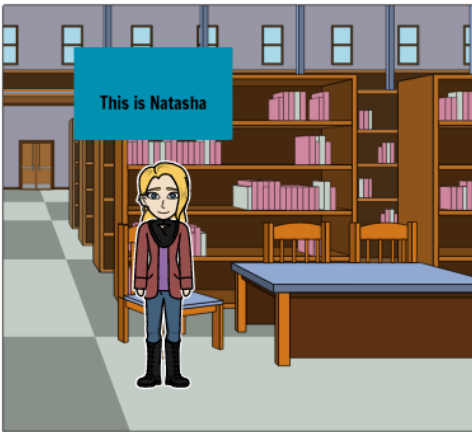

Once the countdown concludes, Harold's phone buzzes with a reminder, letting him know his groceries need to be taken home. This lets him spend time with his grandkids, and avoid food spoilage.

She often delivers foods
that are temperature
sensitive

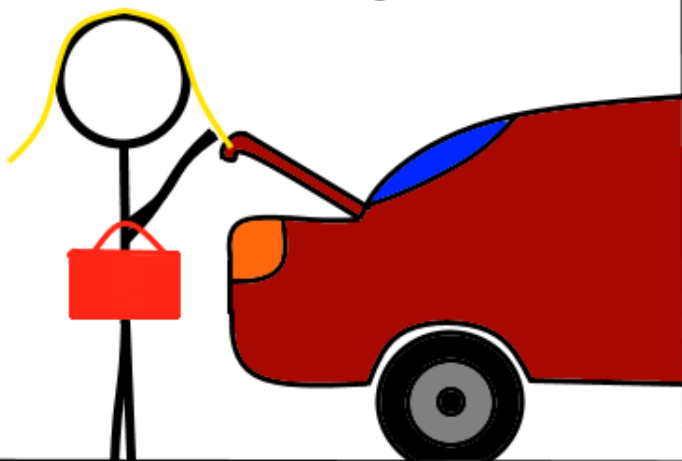

So Natasha can
make her deliveries
without any
worries

Virginia drives all around town with temperature sensitive things in her trunk for work.

Things like Ice cream and medicine

The ice cream will often melt and the medicine will expire if it gets too hot

TEMP TIMER

74 25:30

74 15:12

She uses the app to keep track of all the items in her car and the temperature of the car and how long each item has been in the car.

If anything has been in a high temperature for too long or the car approaches a dangerous temperature she gets a notification.

inside in time

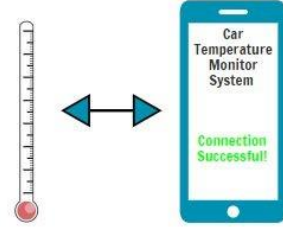

Karen is a single mom of two kids and one dog and has been super busy working at the hospital in Phoenix.

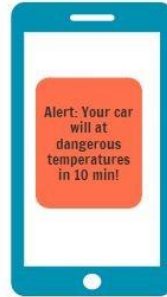

When she does have time to go shopping for her kids, she doesn't have anyone to watch them and doesn't have time to be slowed down. When she leaves her kids and dog in the car, she often doesn't know when the car has become too hot.

Karen realizes this is a problem and buys a Car Temperature Monitor System for her car. She installs the included thermometer in her car and connects it to the app on her phone.

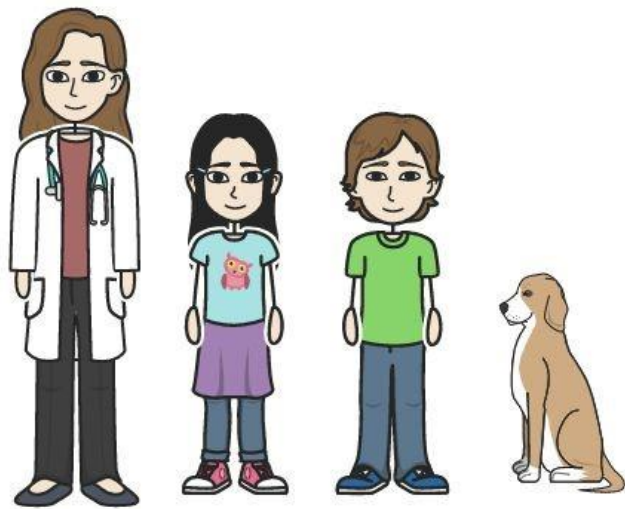

Karen looks through the app categories and adds the items in her car to that app that need to be monitored.

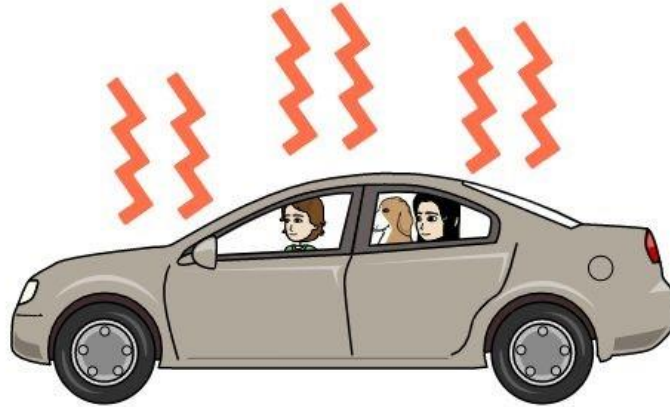

One day while Karen is shopping, she receives a notification from the app. Karen quickly finishes shopping and returns to her car to make sure her kids and dog are safe.

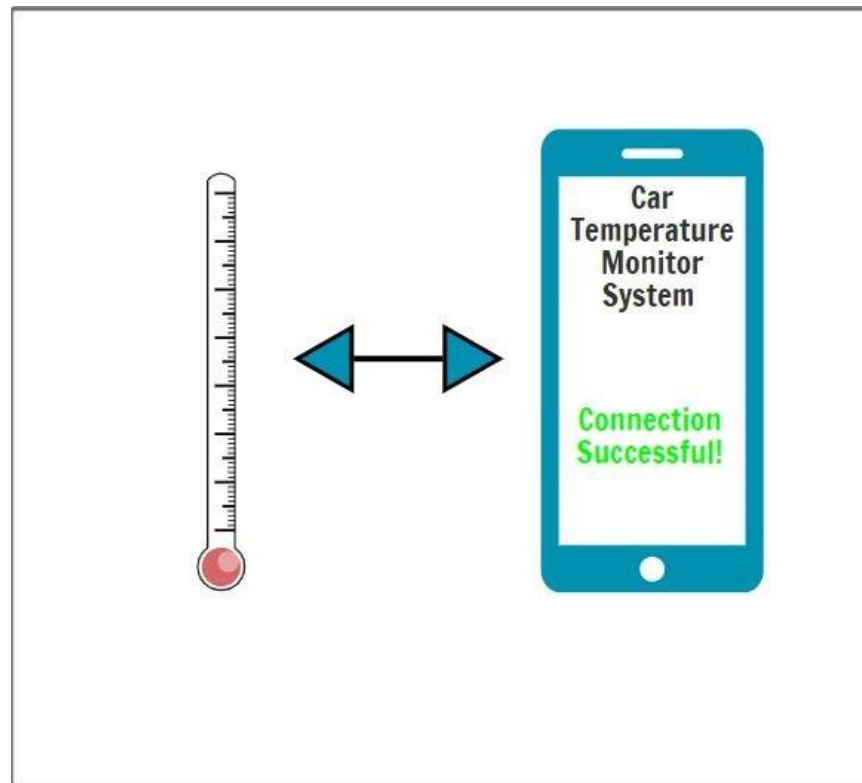

Karen can now focus on shopping when she is at the store while ensuring her kids and pets safety.
